**BUFF CLEAN**

**Buff Clean** is a specially formulated aqueous-based cleaner for removing metallic oxide buffing compounds, fluxes and other non water-soluble coatings. The cleaner is heat activated and contains no butyl or chlorinated solvents. After treatment the part may be easily rinsed. **Buff Clean** leaves the surface squeaky clean.

**FEATURES**

- **Buff Clean** is completely water soluble and contains no chlorinated solvents.
- There are no hazardous ingredients and the spent bath is generally sewer disposable after filtration.
- **Buff Clean** contains a blend of surface active agents in addition to oxide adhesive solubilizers.

**BUFF CLEAN** is effective for removing:

Buffing Compounds

Flux

Adhesive Residue

Paint Stripping

Asphalt

And other tough cleaning jobs

**APPLICATION**

**Buff Clean** is used full strength in a heated and agitated (or ultrasonic) immersion bath. Heat activation is 150°F, but some improvement may be noted over the range to 200°F. Subsurface agitation is essential. Continuous filtration will extend the life of **Buff Clean** by removing suspended solids.

**USE**

Use full strength in a heated immersion bath. Bath must be heated to a minimum of 150°F. Higher heat-up to 200°F will speed removal. Use subsurface agitation or ultrasonic transducer.

**ENVIRONMENTAL**

**Buff Clean** is water soluble and will not attack metals. For plastics or rubber - test first. **Buff Clean** is not flammable nor hazardous.

To do your own tests, ask for a free sample of **BUFF CLEAN**.
